

Skills

- Java, Spring Boot, MySQL, AWS, Microservices, Kubernetes, Docker, Terraform, Azure DevOps, OpenShift, Generative AI

Experience

Software Development Engineer 2 (Backend & DevOps)

Sep 2024 - Present

Rocket Software

Content Automation – Low-Code/No-Code Studio Platform

- Designed and developed scalable backend services and RESTful APIs using Java 17, Spring Boot, and microservices, enabling dynamic UI configuration and improving application responsiveness.
- Modernized the platform by migrating from Java 11 to Java 17 and redesigning the legacy code-generation engine using a JSON-driven configuration model, improving maintainability and performance.
- Investigated and resolved 50+ production issues and customer defects through RCA, log analysis, and distributed debugging, improving application stability and reducing issue resolution time.
- Designed and implemented Terraform-based deployment automation for AWS, Azure, and OpenShift, reducing end-to-end product deployment time from 7–8 hours to under 30 minutes while eliminating manual deployment effort and improving deployment consistency.
- Leveraged LLM-based AI assistants for code generation, debugging, refactoring, and performance optimization while validating AI-generated code through testing and code reviews.
- Collaborated with cross-functional Agile teams on feature delivery, code reviews, automated testing, and performance optimization, ensuring reliable and production-ready releases.
- **Key Technologies:** Java 17, Spring Boot, Microservices, Distributed Systems, REST APIs, Docker, Kubernetes (Helm, k3d), Redis, Hibernate, LLM-based AI Tools

Programmer Analyst

Jan 2022 - Sep 2024

Cognizant

Max Life Insurance Project

- Developed Spring Boot REST APIs enabling seamless frontend-backend communication.
- Improved API performance by 40% using efficient paging, Redis caching, and reduced DB operations.
- Developed robust error handling mechanisms to manage API exceptions and ensure data integrity.
- **Key Technologies:** Java, Spring Boot, Hibernate, Redis, Docker, Microservices

Projects

Care Sync

🔗 <https://github.com/Thomas1782k/CareSync>

- Implemented a Doctor appointment scheduling application using Java, Spring Boot.
- Orchestrated Redis caching, reducing response times by 25% and database load by 40%.
- Optimized paging and authentication, reducing search query response time by 30%.
- Integrated Stripe Payment Gateway for enhanced transaction security and user experience.

Achievements

- **2022** - Gold Medalist and recipient of the Shri B. Subramanian Award for Best Outgoing student.
- **2018** - Guinness World Record holder for the Largest Human Image of a Video Game Controller.
